

Introduction

Anna-Karin is passionate about transforming client goals into well-functioning design, focusing on web, UI and graphic form solutions. With broad experience from a variety of industries and a growing expertise in Webflow, she takes design from idea to delivered website. She combines function and aesthetics to create inclusive user experiences.

Her structure, sense of responsibility and natural ability to lift others make her an effective and inspiring team member.

Work Experience

Webbdesigner and project lead / Wisecure

2025-Q1 - pågående

Wisecure works with sealing solutions for the construction industry. Their website is currently outdated and poorly structured, and customers have difficulty finding the information they need. QueensLabs' assignment is to create new branding and a website for Wisecure. It will be launched early summer 2025. Anna-Karin's role is project management, UX/UI and web development in Webflow. Here her ability to coordinate between customers, teams and tasks comes in handy.

UX/Research

Web design and Webflow development / Scanlube

2024 Q4 - 2025 Q1

Scanlube is a lubricant supplier based in Gothenburg. QueensLab designed their new brand and website.

The goal of the site was to:

- Visually elevate the brand and make it more modern
- Better communicate the importance of lubricants in society
- Attract new employees

Anna-Karin took the lead design role in the web design phase in Figma, and then built the website in Webflow.

The result was a informative, WCAG-compliant website that really highlights the message about how important lubricants are for the world to function. The new website focuses on the employees, which makes it feel more personal and accessible.

WCAG

Web design in Webflow / Queensec

2024 Q4 - 2025 Q1

QueenSec is a cybersecurity company. Their new brand and web design were created at QueensLab and their website was developed by Anna-Karin in Webflow. She worked closely with the web designer and the client, which made the process and its iterations very smooth.

The goal of the site was both to sell their offerings and recruitment, so-called employer branding. The result is a solid, clear and informative site that stands out from the crowd, and it has already generated a lot of value in the form of leads and potential employees.

WCAG

Web design, Webflow support role / YEOS

2024 Q2 - Q3

YEOS turned to Queenslab for a new brand and a new website. The goal of the website was to strengthen the YEOS brand and attract more people to become members and partners. YEOS was looking for a website that exuded energy, community, joy and ambition. Anna-Karin was involved in the entire process from branding to the finished website. The entire web design was done by Anna-Karin. The website was built in Webflow together with a QueensLab partner, a collaboration in which Anna-Karin learned a lot about the framework, best practice and not least smart tips. The results were a youthful and modern website that has already generated several leads and also received several partner requests.

Web design in Webflow / Food and Coffee GBG

2024 Q4 - ongoing

@foodandcoffeegbg is an Instagram and TikTok account run by Nikola Zivkovic. Nikola, who runs the accounts, eats out at restaurants and cafes around Gothenburg and tells his 50k+ followers about them. Nikola wants to create a platform on the web where all of his hundreds of places are collected and searchable. There will also be a blog and a section where he writes recommendations. Anna-Karin has worked independently on this project. She started with wireframes, to create a rough structure and sort out the content. She then moved on to creating a new brand look, in parallel with web design in Figma. The Webflow work has also been going on in parallel with the other, and the biggest challenge has been to create a searchable and filterable interface to quickly find the places you are looking for, something that is now in place and works great. The website will be launched later in the spring.

Graphic designer / Belid

2023 Q3 - 2024 Q4

Belid is an established armature and light designer and producer in Sweden. Their brand breathes quality, design, and proud craftsmanship. Anna-Karin's role is to design brochures for the sales team and for display in the shops all around Sweden. She also designs adverts that are published in SvD, Tidskriften RUM and Elle Decoration.

Consultant: Teacher / YRGO / QueensLab

2024 Q1-Q2

For about 10 weeks Anna-Karin was a consulting teacher for a UX class at YRGO. The main focus was to teach Figma at beginner level. She also held classes in WCAG principles, and how to deliver a great handover to a developer team. In parallel with that, she was also the students' tutor in Figma, supporting them in their projects.

UI Designer / Zooma

2023 Q4 -2024-Q2

Anna-Karin was working with Zooma creating a Knowledge Hub for their client, which is a company that are experts in protective workwear. The hub is built in Hubspot and is an addition to the main site. The goal was to further establish the company's expertise in the field, generating more inbound sales. Anna-Karin's role involved web design, UI, illustration, and design system creation. She worked closely with the developer team and ensured that handover worked as smoothly as possible with a well-structured Figma file and clear documentation of functionality and behavior. Included in the assignment was also to create designs for downloadable content offers as well as designing icons and illustrations from scratch.

Consultant: UI designer / Wireless Car / QueensLab

2023 Q2-Q3

Anna-Karin was part of a small team that created a new design system for Wireless Car. This system will serve as a boilerplate for all Wireless Car's future App, Web, and UI designs.

The workflow consisted in large of creating new design components in line with the new style and colors, testing them in design mockups, and sync them with ZeroHeight; a digitalized brand portal.

The design system consists both of brand guidelines like typography and colors, as well as detailed and sometimes complex UI components, naturally following WCAG standards for accessibility. A well-functioning design system is constantly evolving, developing, and growing. Therefore it is built in such a way that it can easily be updated and tweaked and used for many years to come. Documenting every aspect of the design system to secure correct usage is of course essential.

During the process, Figma launched variables. Using variables instead of fixed design styles has improved the way of working with different color themes greatly and improved the level of flexibility even further.

Consultant: Design lead, UI designer / Zooma/QueensLab AB

2021 Q2 - 2023 Q1

Anna-Karin has been working on various interactive demo projects where the end client is a global telecom company. Interactive demos can be used to demonstrate a new technique or solution for their end client; telecom operators.

Every year in the end of February the Mobile World Congress (MWC) takes place in Barcelona. Zooma produces multiple projects during the winter. Anna-Karin has been a design lead and project manager in nine of them this season. All nine projects were successful. A project like this typically involves wireframing, content structuring, prototyping and design, not to mention a great deal of communication and coordination. Designs can vary between resembling complex system GUIs, explaining and visualizing brand-new techniques in connectivity or simply working as sales material. Anna-Karin has been able to navigate high demands on technical precision and brand compliance, working closely with international engineering teams in complex iterative processes. Being a designer in a project like this puts you in the center of communication between the customer, the project lead, and the development team. To be able to design and communicate in a structured and efficient manner is crucial to avoid misunderstandings and to make the process as smooth as possible. Anna-Karin has a basic comprehension of the development side of design, which is useful in handovers. Especially in a time-critical phase of the project and if many projects at the same time.

Consultant: Web designer / Belid/QueensLab AB

2021 Q2 - Q3

In the Belid project, Anna-Karin was part of a small design team that created Belid's new website from scratch. Based on the Art Director's sketches of look and feel, Anna-Karin and the team developed all views for the different pages. Since Belid is a product page with a large assortment of lamps, it was important to be able to easily search and filter different criteria for finding relevant products. Furthermore, Belid wanted the light, airy and elegant feel of their new brand to be consistent throughout the design. Balancing wishes and requirements from the customer, with what is a good and responsive web solution in practice, is part of the web designer's challenge. The result was a modern, fresh website that highlights the products in an elegant and stylish way. Working in a structured and clear way to make it easier for both customers, design teams and development teams is of great importance in large projects, and is natural to Anna-Karin.

Consultant: Web designer / PE Accounting/QueensLab AB

2021 Q1 - Q2

Anna-Karin was part of a team creating PE Accounting's new website from scratch. Based on the graphic profile and art director's design sketches, she and the team worked out a look and feel that conveys PE Accounting's message about a modern and smart accounting service with AI technology. Balancing wishes and requirements from the customer, with what is a good and responsive web solution in practice, is part of the web designer's mission. The result was a modern-looking new website. Working in a structured manner to make it easier for both customers, design team and development team is of great importance in large projects, and is natural to Anna-Karin.

2021 Q2

Anna-Karin is regularly involved in projects for Zooma, with a global telecom company as the end customer. This project was about producing storyboards for two informative films, together with a team. Apart from illustrating the storyboard, she also created the still image graphics as a basis for animation. In addition, Anna-Karin designed infographics in the form of interactive PDFs to explain and dispel myths in a special field within telecom, as well as creating still images used on the web. All according to the strict brand guidelines.

2021 Q2

Anna-Karin is regularly part of various design processes for Zooma, which has a global telecom company as an end client. During this period, she and a team have developed a storyboard for an informative film in a certain complex technology, and later illustrated still images for animation, according to the company's strict graphic manner. Technical complexity in an aesthetically pleasing way. As part of that chain, it is important to work as methodically as possible so that the work for the animator is frictionless.

2021 Q1

For two weeks, Anna-Karin has been teaching UX students at YRGO. The first week a lecture "Designing for the web" as well as guidance and feedback on their tasks. The second week she taught the design program Figma and supervised and guided the students in the task. Anna-Karin was responsible for the planning that week and also for producing a relevant task which was then reported at the end of the week. Everything was online-based.

Consultant: Web design and illustration / Viseo/QueensLab AB

2020 - Q2

Anna-Karin was part of a team creating Viseo's new website and visual identity. The client wanted to create a playful and unique look to convey their vision. The team created wireframes and web design as well as vivid illustrations. Viseo's website is large with many unique looking subpages, and to keep the large work files very structured was key, not only to create a smooth work flow within the team, but to ensure that the handover to the development team would be as smooth as possible.

Web design

Responsive design

Consultant: UX/Designer / Guldhäftet/Evolve/QueensLab AB

2018 - Q1-Q2

Guldhäftet is a mobile discount application for local companies within the restaurant, hotel, shopping and sport/health field. It needed a full restructure and rebranding, so they turned to QueensLab for UX and design. Anna-Karin worked as the only designer in the project which was developed by Evolve. Since the app was to be fully restructured, Anna-Karin started with a rough interactive wireframe prototype and so the iterative process started. Once the logic and structure was decided upon, Anna-Karin designed the new look and feel which resulted in a modern looking and inviting app.
